# PolarStar

Mobile Cooler Cart

## Flexibility at Outdoor- and Indoor-Events

The PolarStar provides you with mobile vending versatility for use in stadiums, trade fairs, and any indoor or outdoor event.

Simply load the PolarStar with chilled beverages and add ice – your mobile vending stand does not require any electricity. Great insulation keeps temperature stable for hours.

### Product details:

- Completely insulated – holds temperature stable for hours
- Two separate compartments, both lockable
- Easy to manoeuvre with the large, high quality wheels made by Blickele
- Two fixed wheels and two guide wheels with wheel locks
- Grips to push on both sides for easy wheeling
- Two slots for umbrella, sun roof, or overhead display
- Large advertising space on the front, with more space on the optional overhead display
- Closable spigots for each compartment, allowing for easy draining of melted ice
- Easy to clean
- Branding area on both sides: 145 x 50 cm

Price/piece (net): ..... 1.590.-€

The PolarStar mobile cooler cart allows you to sell chilled beverage without being tethered to an electrical outlet. The PolarStar gives you the ability to quickly set up a whole new selling station to meet sudden increases in demand. Just fill the two separate compartments with chilled plastic bottles or cans and cover them with ice, and your new beverage station is ready for the customer rush.

With large, high quality wheels, your PolarStar has maximum mobility and maneuverability. And when you choose a spot, just engage the wheel locks.

When we manufacture the PolarStar, we put all our effort in insulation and durability. Unlike other cooler carts, the inside of the impact resistant ABS plastic shell is lined by special 25 mm thick aluminium insulation panels. The shells are also fitted with shaped foam panels, leaving no air pockets in the corners. This means that your beverages are insulated on all four sides, the bottom, and the lids by a thick layer of foam, two layers of aluminium, and two layers of impact resistant plastic. Because of this advanced isolation system, the PolarStar is able to keep a stable temperature even when the top is opened frequently.

The front of the PolarStar features a very large space for your individual advertisement. In addition, an overhead banner, flags, or umbrellas can be attached to the PolarStar.

Our PolarStar is a great asset if you are also using our Vending Trays, VendorKings, and DrinkMan products. The PolarStar cooler carts can be placed strategically at an event and act as restocking stations so runners using other mobile vending products can refill without returning to the base station. This optimizes the logistic chain, since the PolarStar may be closer to a runner's area than the base station.

With in-house production and more than a decade of experience.
